

Red Cinder Sand

PRODUCT DESCRIPTION:

Red Cinder Sand is crushed volcanic rock that gets its appearance from the simultaneous rapid cooling and depressurization process after being ejected out of a volcano. Red Cinder Sand has small vesicles, which is what causes it to be so light in weight. These vesicles help to retain nutrients and moisture when used as a soil amendment. Red Cinder Sand will also help with drainage as it creates great pore space in soil. It also does not attract fungi, nematodes, or insects. Red Cinder Sand has also been incorporated as an Infield & Warning Track component for baseball fields. Red Cinder Sand can also be used for decorative purposes in landscaping.

PRODUCT USES:

- Soil Amendment
- Infield & Warning Track Component
- Decorative Purposes for Landscaping

PRODUCT ANALYSIS:

Composition.....Crushed Volcanic Rock
Particle size.....<1/8"
